CARU-It should be generally known that persons so unfortunate as to bee one or more of their teeth need not wait weeks and months for artificial substitutes and endure inconvenience, disagreeable changes in voice, facial averaging to but may have artificial cisl expression, &c., but may have artificial teeth made before and inserted immediately after extraction of their natural teeth. By this mode a better adaptation, a more pleasant expression and a nearer appreach toward preserv-ing the natural harmony of the features are secured, and very much of the pain and difficulty experienced in learning to use teeth are also avoided. I have practiced this mode successfully for seven years, and having introduced it here, would be glad to refer any one interested to patients who know of it from experience. In treating the natural teeth my object is to preserve every one that time. one that time, patience and modern methods of treatment can save. The use of arganic in de-stroying exposed nerves is condemned by the more enlightened of the dental profession on account of its turning teeth dark, inducing ab scess and finally the loss of the teeth. The nerve pulp, which is the source of life to the tooth, should always be treated, whon exposed, with a view to its restoration to health. I use no cheap alloys for filling; my fees are much less than are usually charged for the same class of work. Gold filling from \$1.50 up; other work at proportionately low rates.
